

From the vibrancy and entertainment in the heart of Canggu

.....to a sanctuary where inspiration, style and holistic living converge

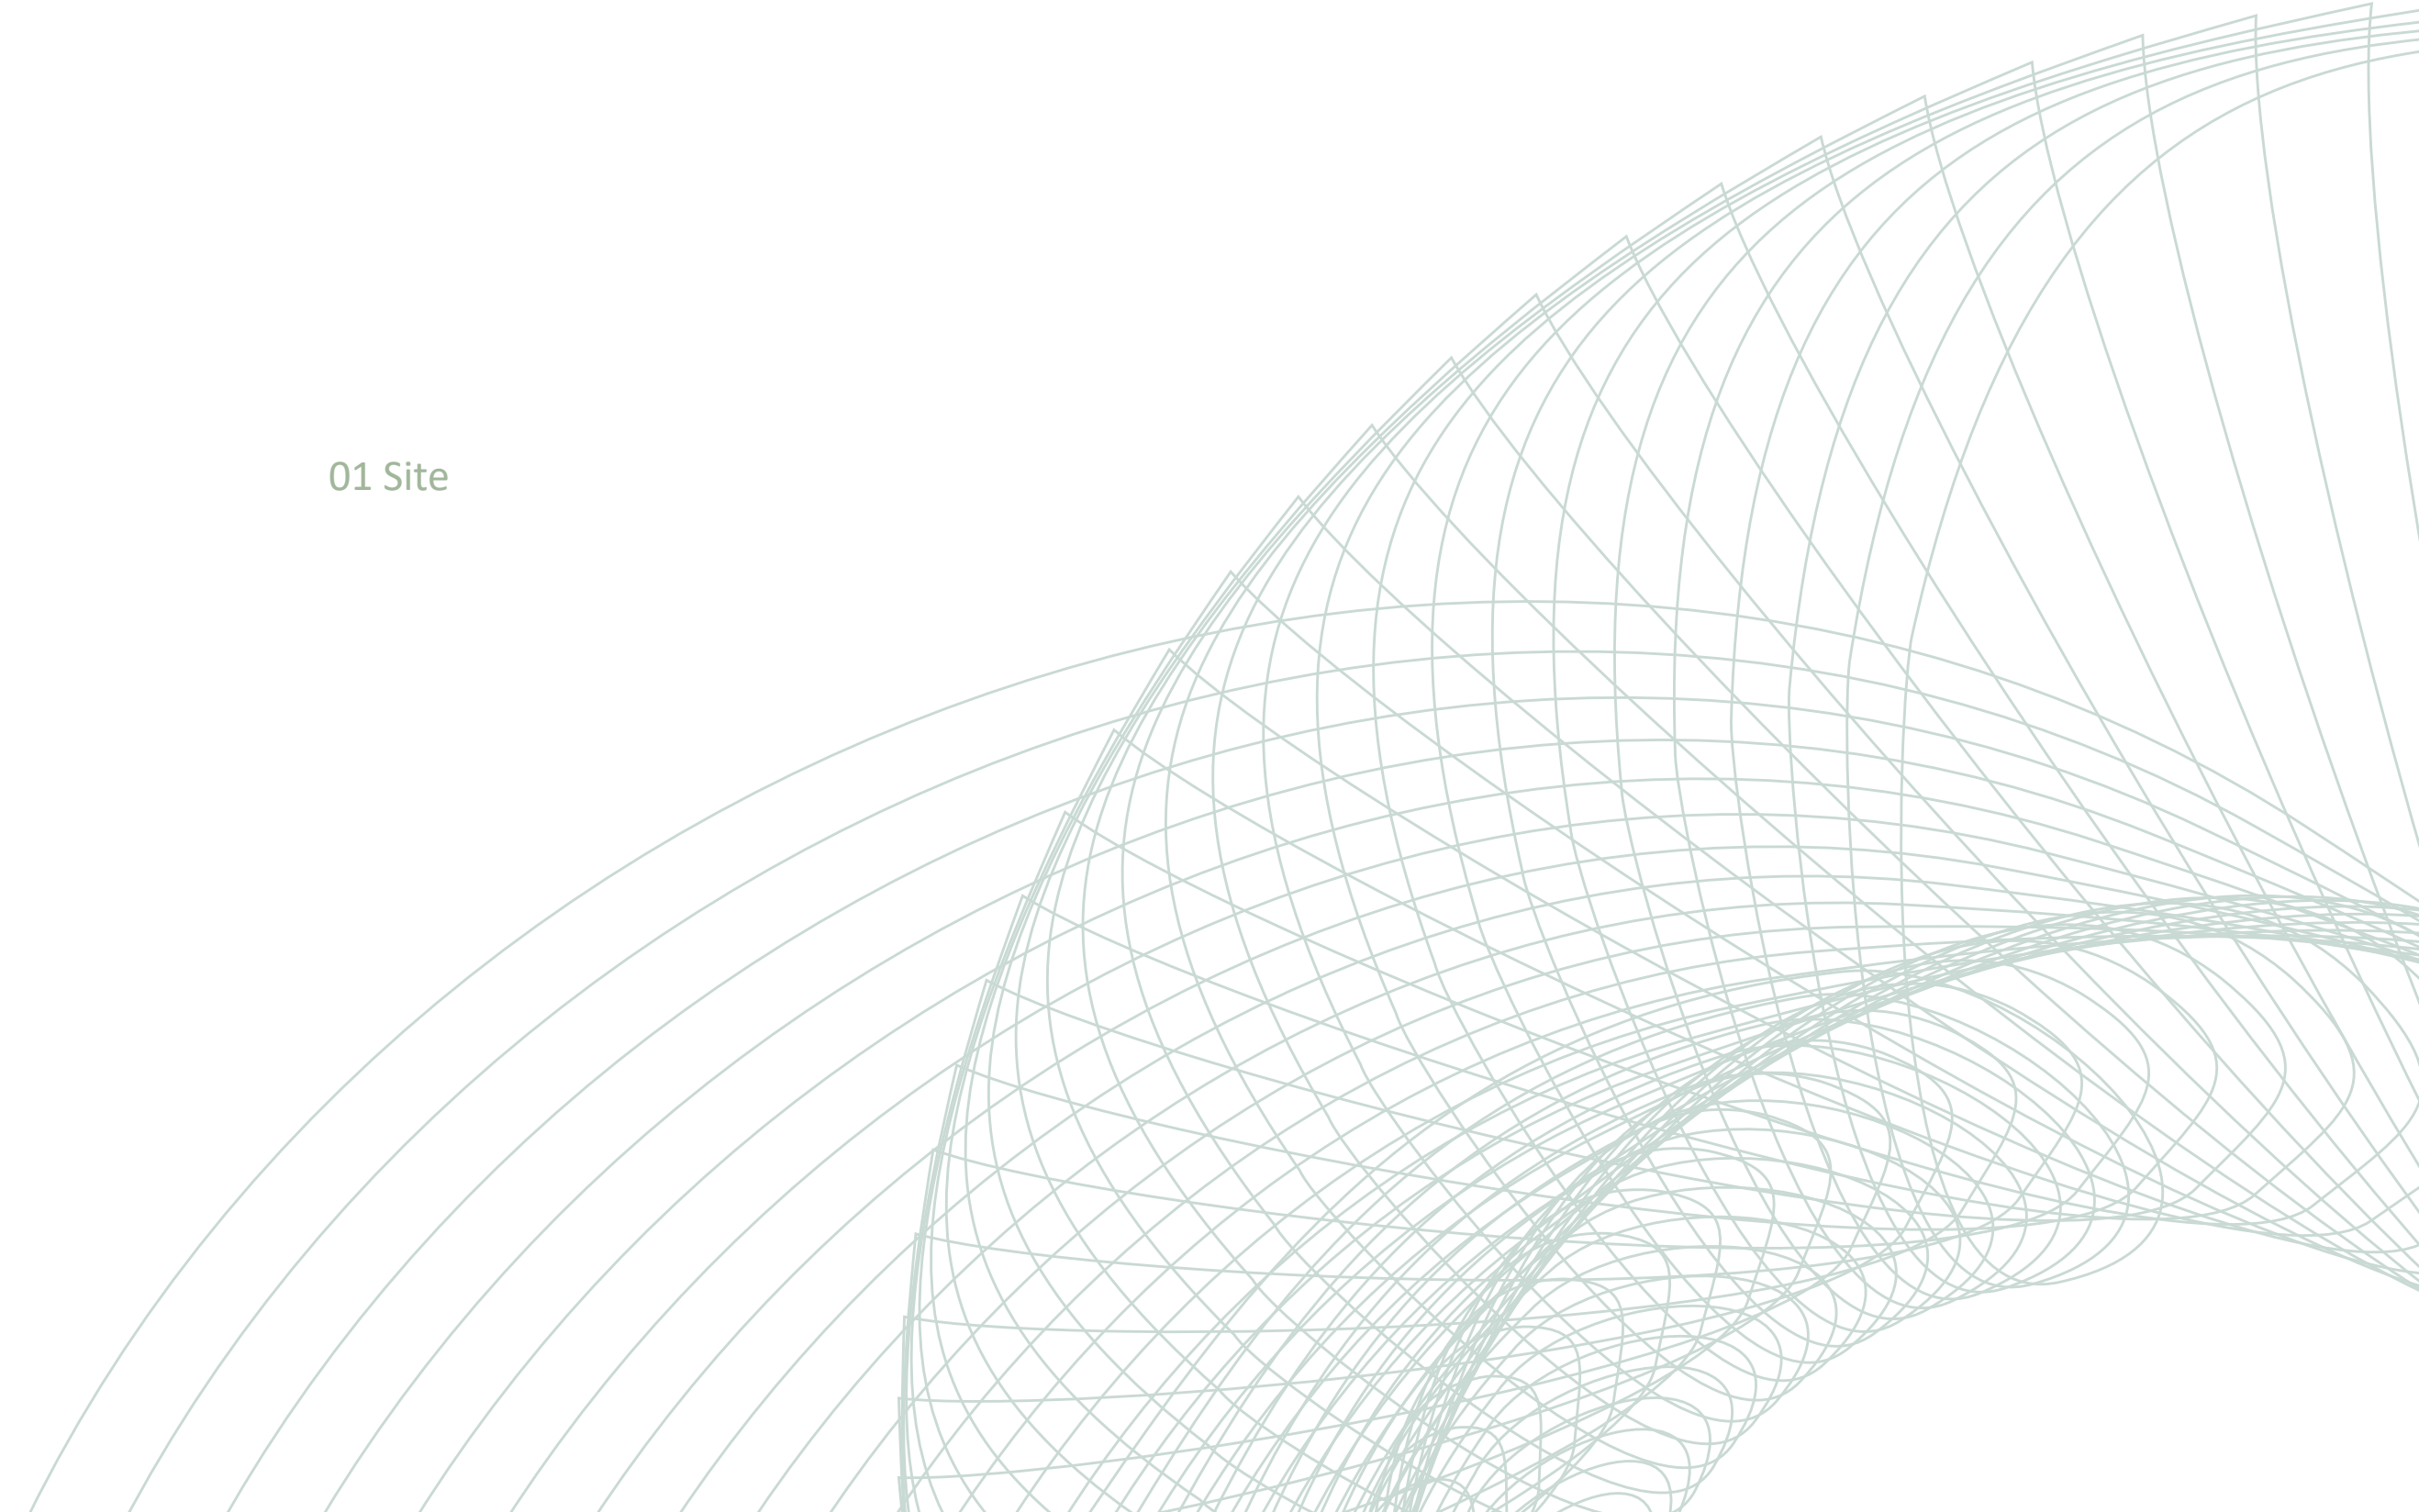

OBJECTIVES

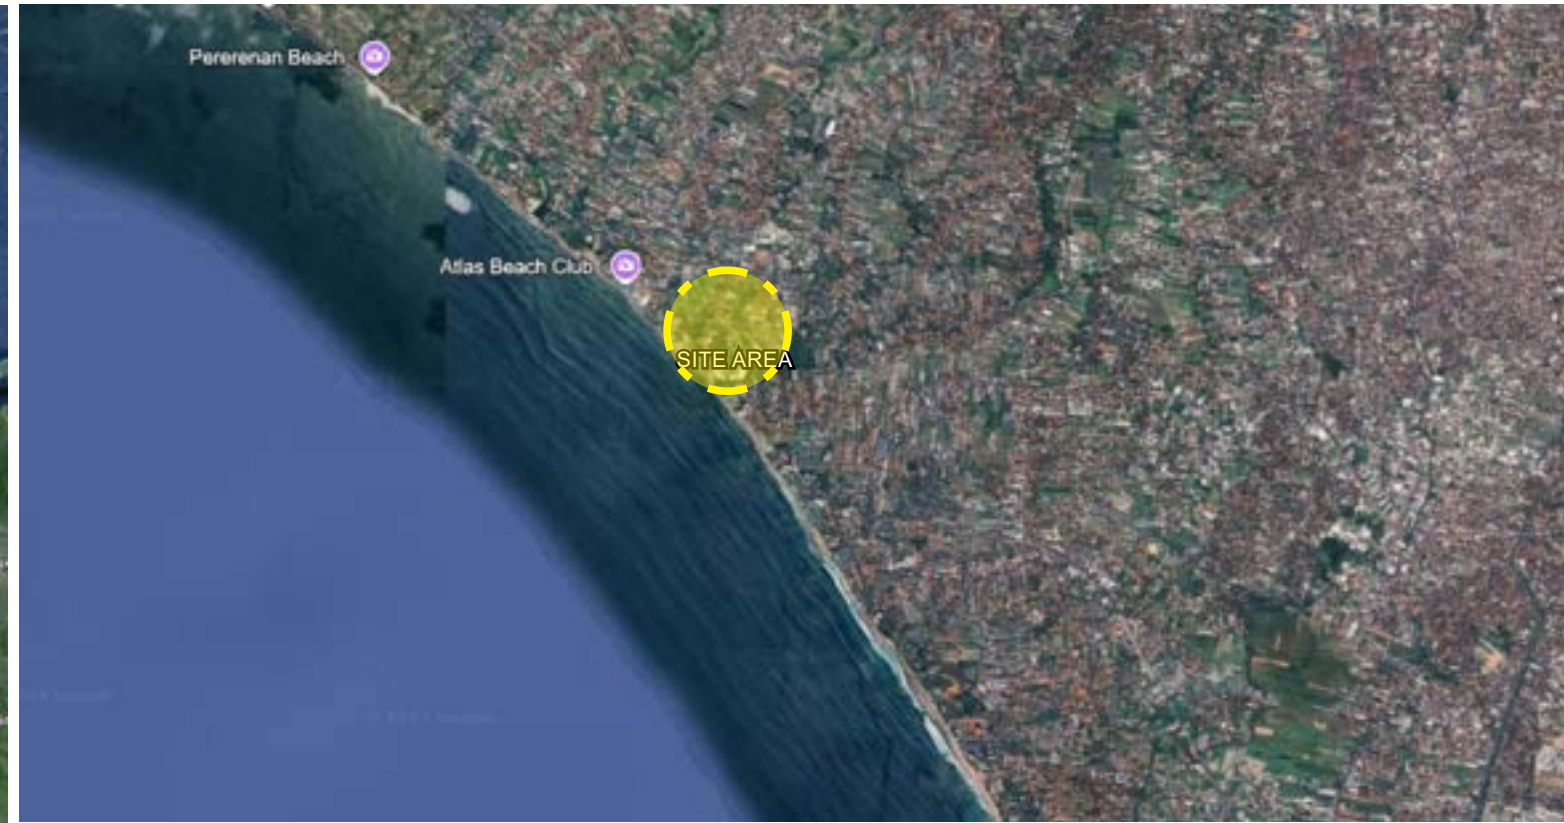

- To design a destination that embodies the Wylder brand of sensual lifestyles, with a sophisticated blend of flair and well being.
- Develop a landmark experience for both tourists and the local community
- Design spacious, pragmatic, and comfortable facilities maximizing natural light and ventilation that extends the aura of tropical living.
- Support diverse occupant lifestyles within a holistic framework, ensuring spatial efficiency while accommodating a variety of moods and functions.
- Implement brand identity through design, seamlessly integrating nature-inspired aesthetics and a sustainable design approach.
- Design dedicated buildings and facilities that caters to the program and function of the complex.
- Place-making highlighted by attractive open spaces providing a lush atmosphere and accented by cutting edge, natural and highly sustainable buildings
- Heighten the atmosphere of tranquility, relaxation and activity according to each zone.
- Integrate eco-friendly and sustainable features into the design.

This project captures the spirit of the Balinese environment, fostering rejuvenation and connection within a thoughtfully integrated community. Conceived as a multi-functional destination, it features a dynamic mix of hotel, wellness center, speakeasy, and rooftop bar. Each space flows seamlessly into the next, offering an elevated experience that blends elegant, sophisticated hospitality with tranquil settings designed for rest and mental well-being.

01 Site

The Wylder Canggu is located on Jl. Subak Sari, one of Canggu’s most sought-after and rapidly developing areas. Just a 5-minute walk from the beach and the iconic Café Del Mar beach club, the site offers an enviable location with strong lifestyle appeal and excellent commercial potential.

The land is generally flat, making it ideal for development with minimal groundwork. It is surrounded by a vibrant mix of luxury villas, boutique resorts, trendy cafes, and wellness studios, contributing to the area’s refined yet relaxed coastal atmosphere.

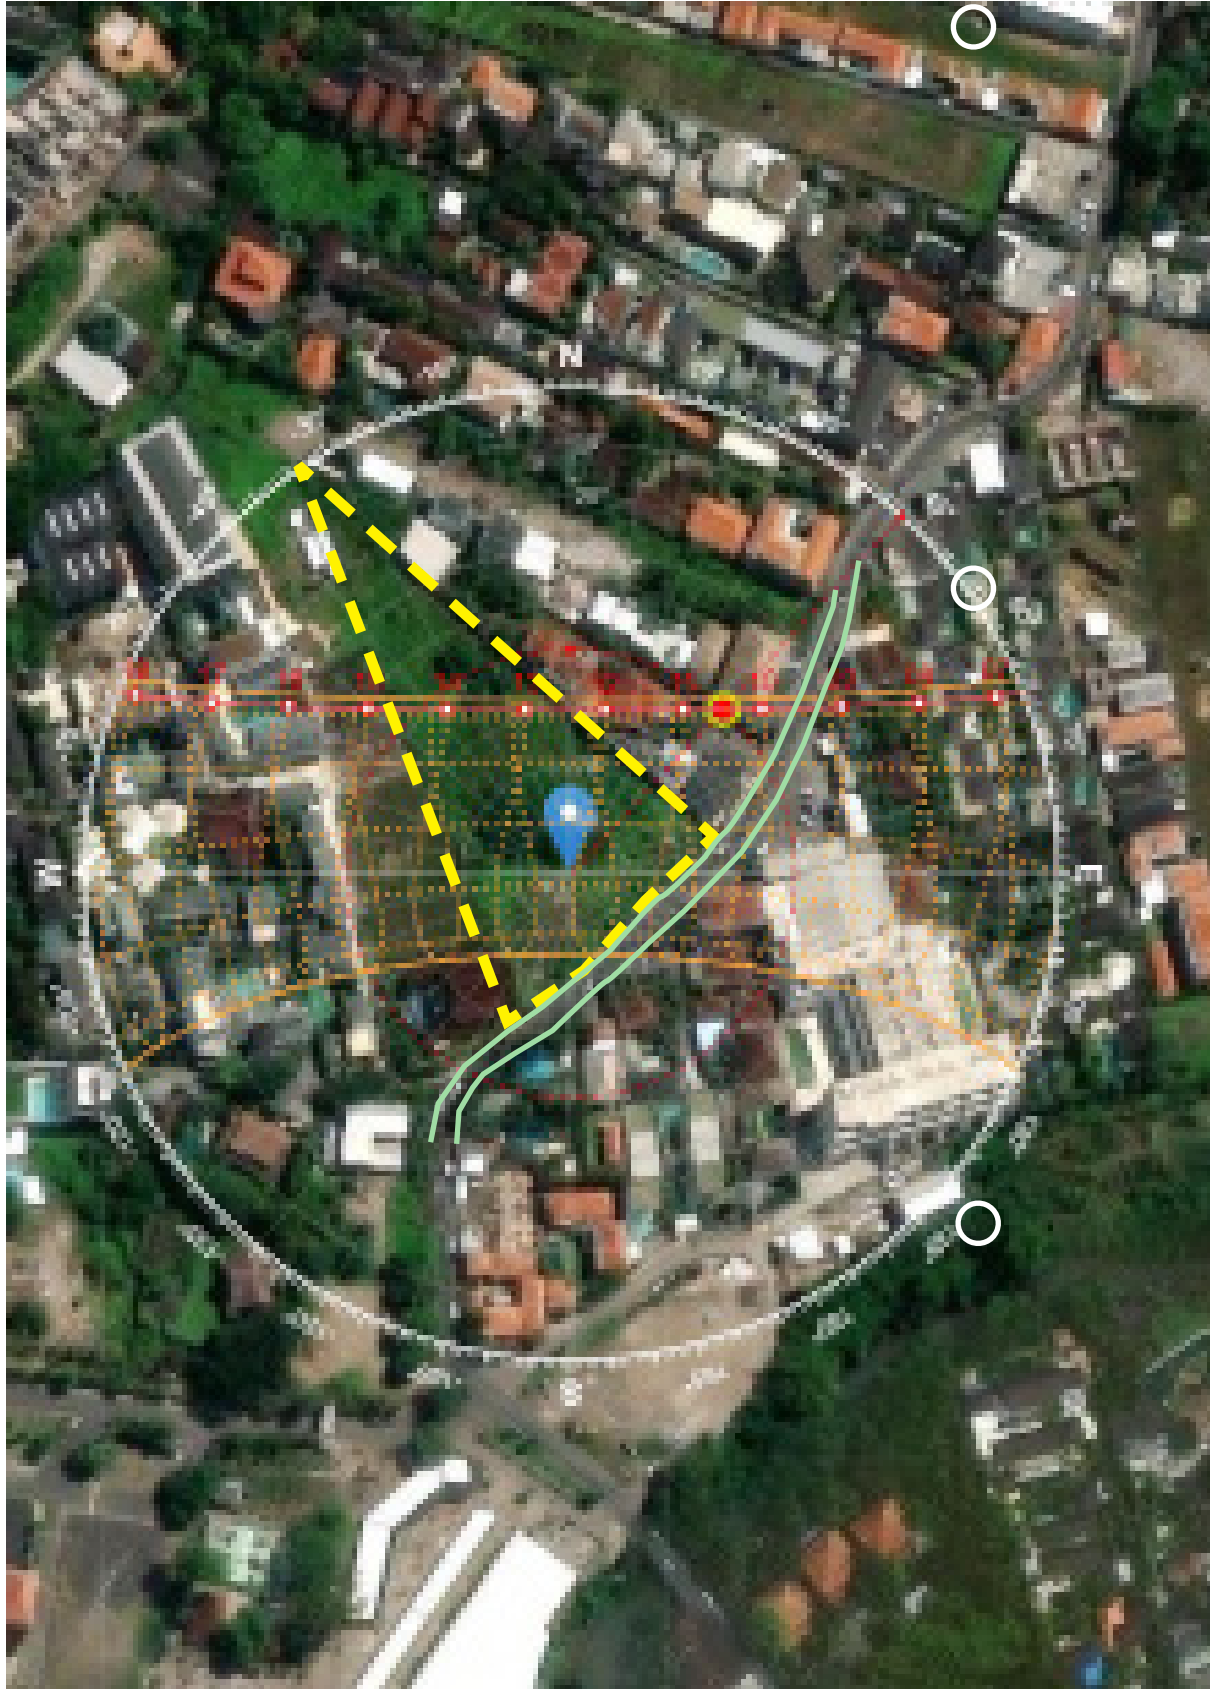

The site is easily accessible via a well-maintained asphalt road, suitable for both cars and motorbikes. Essential infrastructure—including electricity, water, and high-speed internet—is readily available, supporting both residential and commercial development.

Canggu has a tropical climate with warm, averaging 27–32°C (81–90°F). The site benefits from excellent solar exposure, ideal for passive design and energy efficiency. On July 14, 2025, the sun rises at 06:36 and sets at 18:15, providing nearly 11 hours and 40 minutes of daylight. By 10:30 AM, the sun is already high in the eastern-southeastern sky (azimuth 42.68°, altitude 48.51°), ensuring abundant morning light—especially on southern and western facades. This makes the site perfectly suited for light-filled interiors and sun-oriented outdoor living spaces, maximizing Bali’s sunny, tropical conditions.

centred on physical activity, relaxation, and a profound connection to Bali’s natural surroundings. The design will incorporate views, native vegetation, and natural features to create a resilient sanctuary closely tied to its environment.

Central to its design philosophy, this apartment complex embodies holistic living principles, striving to cultivate a natural connection to ones environment while making an iconic statement for both prospective occupants and along the streetscape. Drawing inspiration from the banyan tree, the structure's form and materiality are thoughtfully crafted to mimic its intricate branching. This design choice weaves through the building's facade, creating a unique experience as users navigate through corridors and balconies and to the range of facilities on offer.

The complex is supported by conventional structure, clad with sustainably sourced materials, establishing a cohesive palette for its balconies and terraces. This architectural approach goes beyond aesthetics, but aims to integrate itself within its surrounding context as a haven for living.

As one strolls along the light filled, naturally ventilated corridors, pockets of greenery can be discovered- each inviting space designed for contemplation and connection. At its core, this apartment building goes beyond traditional living spaces; it offers residents with a place of respite.

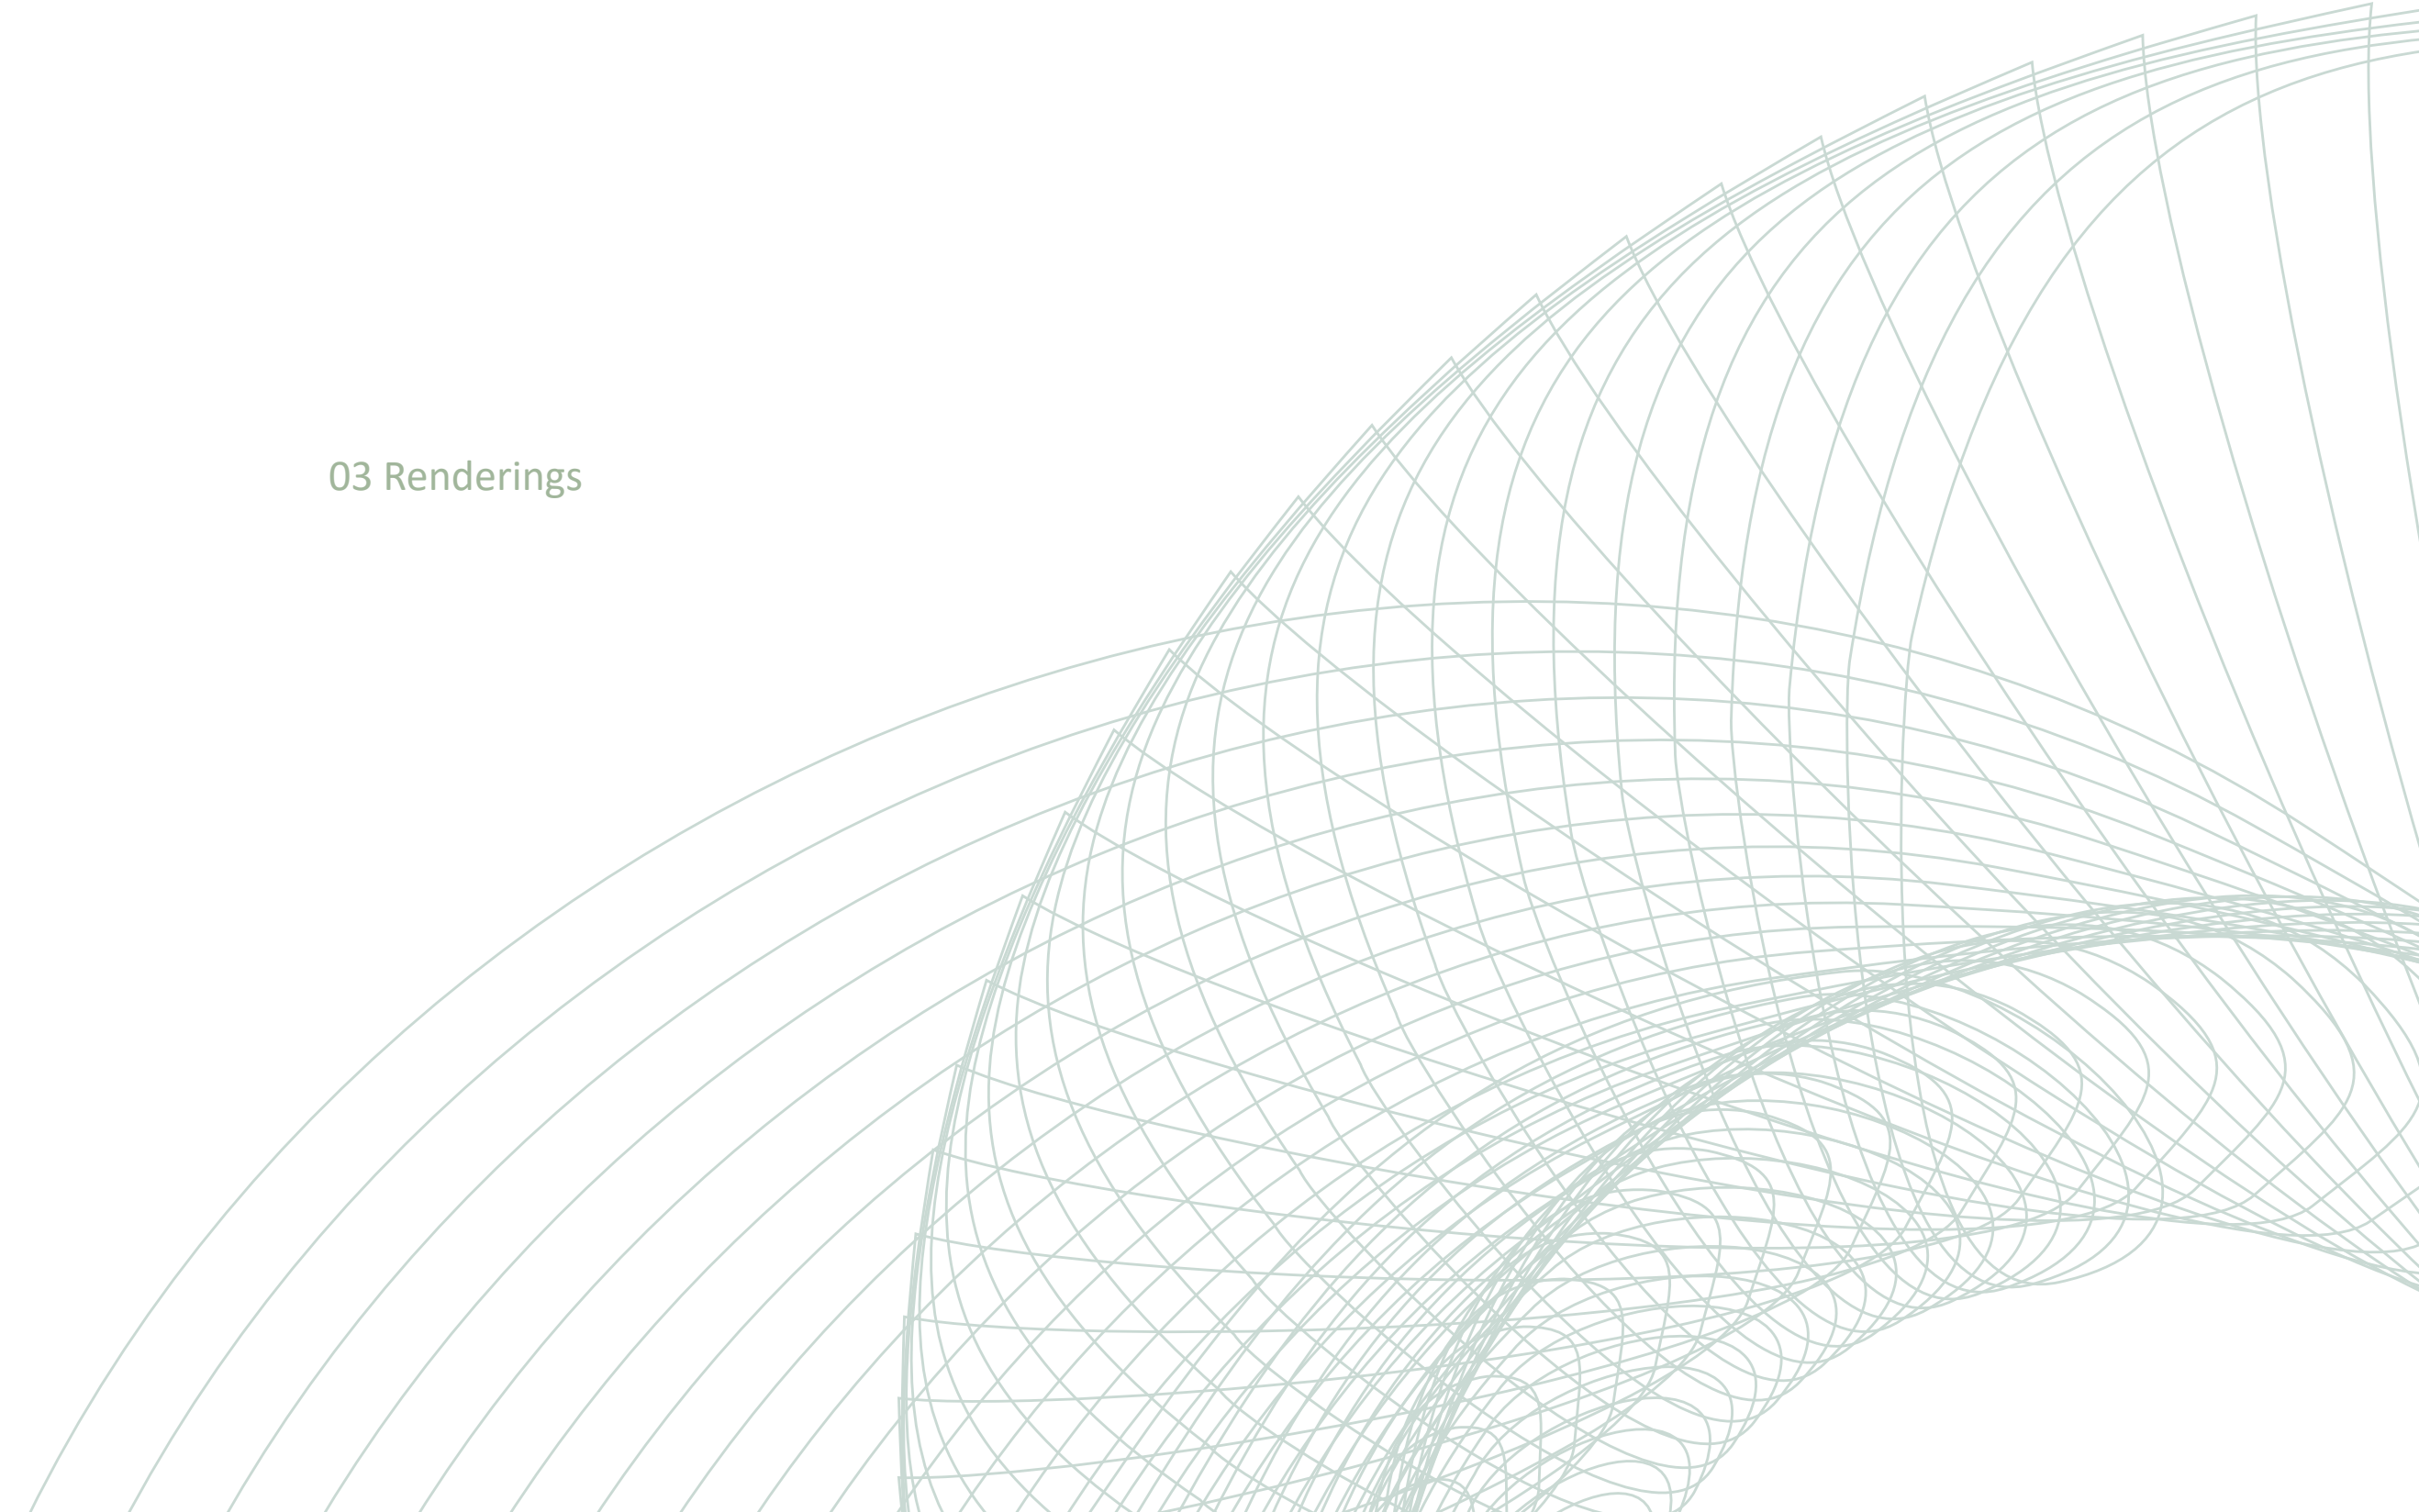

Using the wealth of materials that Indonesia can provide, interesting combinations can be made that reflect the abundance of the land. This also helps with environmental concerns especially if we can take advantage of eco materials, such as bamboo and plantation timbers. Walls can predominantly be whitewashed, or lime rendered which will highlight natural ascents.

Elsewhere the scheme can subtly draw on glowing jewel colours and warm tones that compliment the overall masterplan.

05 Public Area

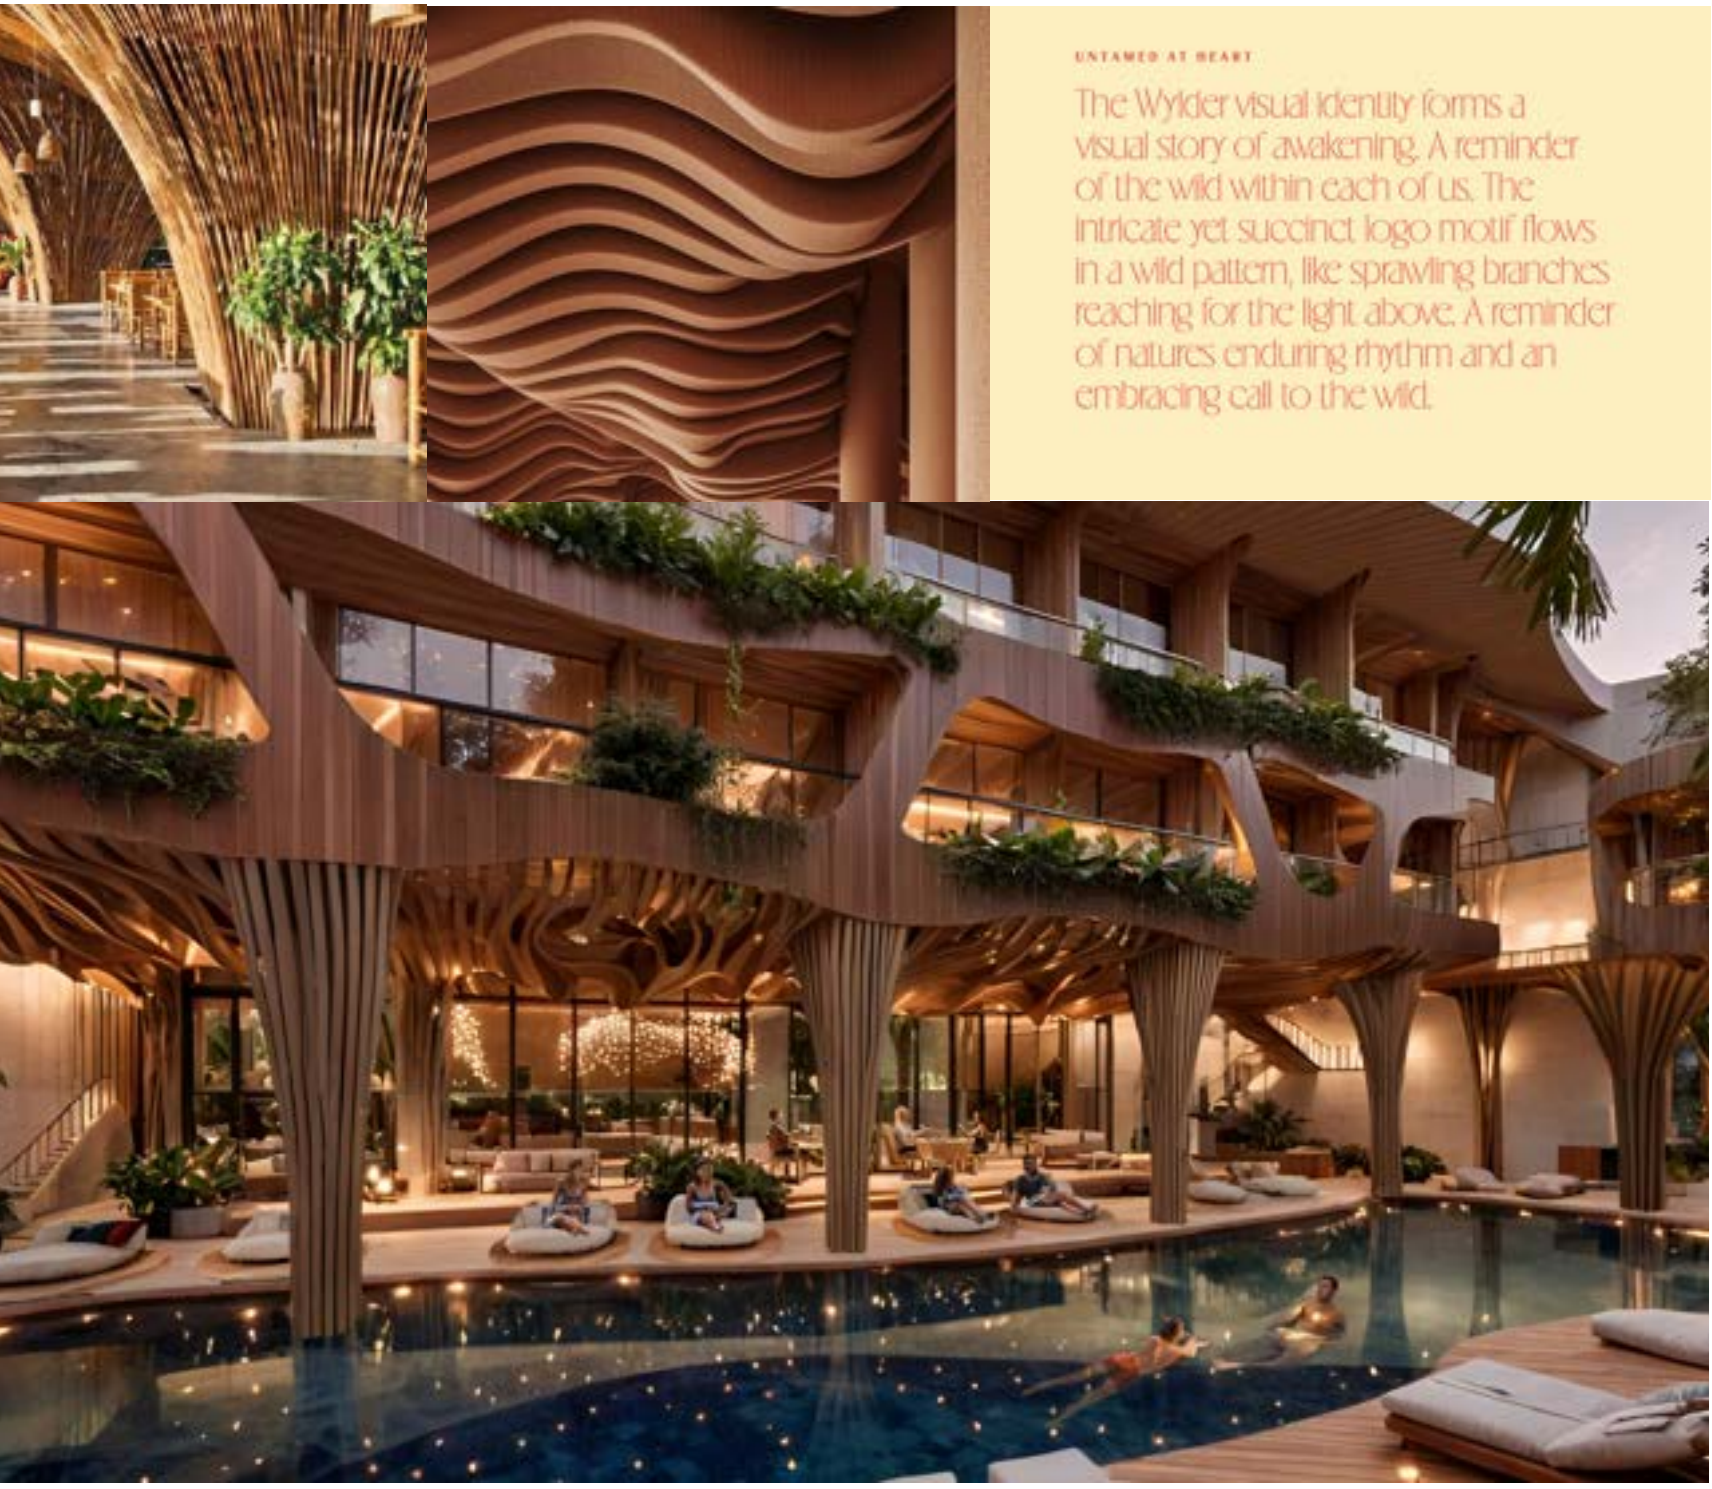

This design concept presents a luxury organic-modern hotel lobby, distinguished by fluid architectural forms, warm natural materials, and immersive biophilic elements. The architecture draws inspiration from the natural world, employing curved, sculptural geometries that evoke a sense of movement and harmony. The spatial experience is a seamless blend of contemporary sophistication and nature-inspired design, creating a welcoming yet dramatic environment that engages the senses. Wood textures, soft lighting, and natural motifs work together to establish a refined and calming atmosphere. Envisioned for high-end hospitality settings—particularly in tropical or resort environments—this lobby concept is designed to elevate the guest experience from the very first moment, offering a tranquil, immersive, and visually captivating setting that reflects the surrounding landscape and sets the tone for luxury and relaxation.

This restaurant concept is designed for a high-end tropical resort, eco-luxury retreat, or boutique hotel, capturing the essence of immersive natural living with the sophistication of a world-class dining experience.

Organic forms and natural materials flow in harmony with the landscape, dissolving boundaries between architecture and nature. The result is a space where design and ecology converge, offering guests a serene, elevated connection to their surroundings.

This lagoon pool concept is a sculptural escape, where organic design meets resort luxury. With flowing decks, integrated loungers, and architectural canopies, it creates a tranquil, immersive oasis that blends seamlessly with nature.

This rooftop bar merges organic architecture with elevated luxury, offering panoramic views in a setting that feels both natural and refined. Flowing timber structures, lush greenery, and ambient lighting create a seamless indoor-outdoor experience — a social sanctuary where nature and sophistication converge above the canopy.

This penthouse design concept is a refined retreat suspended in nature. With undulating wooden architecture, expansive glazing, and private plunge pools, it offers a seamless blend of indoor elegance and outdoor serenity. Soft lighting, organic curves, and lush plantings create an elevated, tranquil escape above it all.
